

Scalability & Future Plan

Date	6 July 2026
Team ID	Individual
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to support larger datasets, increased user access, and additional features in the future. It also describes the roadmap for improving and extending the A Comprehensive Measure of Well-Being project beyond its current implementation.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Limited dataset size	Prediction accuracy may reduce when handling large-scale and diverse data	High
2	Limited user access capability	The current Flask application supports a limited number of users simultaneously	Medium
3	Dependency on manual data updates	New development indicators need manual integration into the system	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Supports limited users through Flask web application	Deploy the application on cloud platforms with load balancing to handle more users
2	Data Storage	Uses local dataset storage	Integrate cloud-based databases for storing and managing large datasets
3	Performance	Model prediction depends on available computing resources	Optimize machine learning models and use advanced algorithms for faster predictions
4	Security	Basic application-level security	Implement authentication, authorization, and secure data handling mechanisms

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
-------	-------------------------------	-----------------	-----------------

Phase 2	Integration of larger global development datasets and improved ML models	3–6 Months	Better prediction accuracy and reliability
Phase 3	Cloud deployment and real-time data integration	6–12 Months	Improved accessibility and scalability
Phase 4	Development of AI-based recommendation system for improving well-being indicators	12+ Months	Provides personalized insights and decision support

Project Outcome:

The proposed scalability plan will help transform the system into a more reliable, efficient, and intelligent well-being prediction platform capable of handling larger datasets and future enhancements.
